

How to Configure a SharePoint Web Forward

<https://campus.barracuda.com/doc/46209059/>

The Barracuda NextGen Firewall F-Series SSL VPN offers preconfigured templates for Microsoft SharePoint 2010 and 2013. The template automatically fills in all necessary web forward parameters and configures Single Sign-On using the session username and password. If the user must use a different password or user to sign in, create user attributes to replace the session attributes.

Configure a SharePoint Web Forward

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > SSL-VPN**.
2. In the left menu, select **Web Forwards**.
3. Click **Lock**.
4. Click **+** to add a web forward to the **Web Forwards** list. The **Web Forwards List** opens.
5. Select the **SharePoint** template matching your SharePoint server from the **Web Resource Template** dropdown. The **Enter Name** window opens.

Web Resource Access Authorization

Active

Web Resource Template Sharepoint2013

6. Enter the non-qualified hostname of your Microsoft SharePoint server and click **OK**. E.g., yoursharepoint

Do not enter a FQDN for the SharePoint server.

Enter Name

What is the hostname of the SharePoint server?

yoursharepoint

OK Cancel

7. Enter the Single Sign-On (SSO) domain for your SharePoint server and click **OK**.

Enter Name

What domain is used for SSO?

yourdomain.com

OK Cancel

8. Enter the **Visible Name**. This is the name used in the desktop and mobile portal for this web forward.

9. (optional) Enter a **Link Description** in HTML. The link description is not displayed in the mobile portal.
10. (optional) Check **Must be Healthy** if the user has to pass a health check before launching the forward. This setting requires a configured NAC client on a Windows device and policy server. For more information, see [Access Control Service](#).
11. (optional) To restrict access to the web forward by user group, replace the * entry in the **Allowed User Groups** list. Click + to add new user group.
12. (optional) Click **Ex/Import** to upload a custom icon.
13. (optional) To use user attributes to sign in, replace the session attributes in the **HTTP Authorization Headers** section with user attributes. For more information on how to create user attributes, see [How to Use and Create Attributes](#).
14. Click **OK**.
15. Click **Send Changes** and **Activate**.
