## How to Configure URL Filter Overrides

<https://campus.barracuda.com/doc/46209081/>

You can use the Override feature of the URL Filter to grant temporary access to otherwise blocked URL categories. URL categories that are set to the **override** policy redirect the user to the customizable Override Block page of the URL Filter. The user can then select the override admin and request an override. The override admin must log into the override admin interface and grant the request for a specified time. When the request has been granted, the user is automatically forwarded to the website. Overrides are always granted for the entire URL category.

To see URL Filter Overrides Request in action, watch the following video:

URL Filter Override Requests  
Barracuda *NG Firewall*

### Before you Begin

---

- Create or edit existing URL Policy objects in order to use the **override** policy for the URL categories of your choice.
- Configure URL Filtering in the Firewall. For more information, see [How to Configure URL Filtering in the Firewall](#).

### Step 1. Create the SSL Certificate and Admin Users for the Override Admin Interface

---

Create or upload an SSL certificate for the Override interface. This certificate is also used for the ticketing system.

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > Firewall > Forwarding Settings.**

2. In the left menu, select **Authentication.**

3. Click **Lock.**

4. Import or create the **Default HTTPS Private Key** and **Default HTTPS Certificate.**

This SSL certificate is also used by inline and offline firewall authentication. If inline authentication is used, the **Name** of the certificate must be the IP address or an FQDN resolving to the IP address of the Barracuda NextGen Firewall F-Series. This value is used to redirect the client to the authentication daemon.

5. Click **Edit** to add **URL Filter Override Users.** The **URL Filter Override Users** window opens.

6. Click **+** to add a **User specific data** entry.

7. Enter the **Name.** This is the username used to log into the override admin interface.

8. Enter the **Password.**

9. Enter the **Full Name.** The user can select this name from the dropdown on the Override Block page when requesting and override from a specific admin.

10. Enter the **User email.**

11. Click **Send Changes** and **Activate.**

## Step 2. Create App Redirect Access Rule for Override Admin Portal

Add an access rule to redirect the admin user to the web filter override admin page. This rule will also allow access to the guest user ticketing system.

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > Firewall > Forwarding Rules.**

2. Click **Lock.**

3. Create an **App Redirect** access rule:

o **Action** – Select **App Redirect.**

o **Source** – Select the source network allowed to access the web filter override portal.

o **Service** – Select **HTTPS.**

o **Destination** – Enter the IP address the override admin interface is accessed through. You can use any free IP address (e.g., 1.2.3.4) or an IP address on the Barracuda NextGen Firewall F-Series that does not have a listener on port 443.

o **Redirection** – Enter 127.0.0.1

App Redirect

LAN-2-OVERRIDE-ADMIN

Bi-Directional
  Dynamic Rule
  Deactivate Rule

| Source  | Service                             | Destination     |
|---|-------------------------------------|-----------------|
| Trusted LAN   | HTTPS                               | <explicit-dest> |
| Ref: Trusted LAN Networks<br>Ref: Trusted Next-Hop Networks | TCP 443 https Report if other th... | 1.2.3.4         |

Redirection  Create Proxy ARP

Local Address  
127.0.0.1

4. Click **OK**.
5. Place the access rule so that it is the first rule to match for HTTPS traffic to the chosen admin override IP address.
6. Click **Send Changes** and **Activate**.

The admin ticketing interface is now reachable via <https://1.2.3.4/cgi-bin/override-admin> (if you used 1.2.3.4 as the destination IP address in the access rule).

## Granting URL Filter Override Requests

JavaScript must be enabled in the client browser for the override request to be sent.

**Warning: Web Page Blocked!**

The web page that you were trying to visit has been blocked in accordance with the corporate security policy. If you require temporary access to this web page, click "Request Access" below. You may also choose the responsible person to grant access from the drop-down list.

URL: www.budweiser.com  
 Category: Alcohol/Tobacco  
 Barracuda NG Firewall Gateway: HQ-NG2  
 Application Rule: FilterAlcoholandTobacco

Send request to: All

Request Access

The URL Filter Override page is displayed when you attempt to access a website that is in an override URL category. To access such a blocked page, select from a drop-down list an override admin to send your access request to and then click **Request Access**. After the override admin grants the request, click **Request Access** again to continue to the previously blocked website. If the admin denies the

override request, the URL category is blocked for the set duration.

For more information, see [How to Grant URL Category Overrides - User Guide](#).

## Logging for URL Filter Overrides

URL Filter overrides are logged to **/Box/Firewall/Acknowledged**.

| Time                | Type | TZ     | Message   |
|---------------------|------|--------|---|
| 2015 06 19 19:46:07 | Info | +10:00 | firewall: [Override] action=re-/new request adminuser=All user=external srcIP=10.0.10.11 category=Alcohol/Tobacco |
| 2015 06 19 19:46:32 | Info | +10:00 | firewall: [Override] action=grant adminuser=test user=external srcIP=10.0.10.11 category=Alcohol/Tobacco          |
