View the [Barracuda Networks Online Service Terms](#) on the Barracuda Networks website.

The Barracuda Cloud Archiving Service is a Software as a Service (SaaS) solution hosted in the Barracuda Cloud, previously referred to as direct-to-cloud. The Barracuda Cloud Archiving Service is designed for customers that do not want to manage a physical or virtual appliance. It is simpler to deploy than public cloud versions of Barracuda Message Archiver, without additional infrastructure investment.

Where to Start

Follow the steps in the [Getting Started](#) section, and then select your [deployment](#) to establish a connection between your Barracuda Cloud Archiving Service and your email provider or email server.

If you are deploying the Barracuda Cloud Archiving Service with [Email Gateway Defense](#), relaying archived mail through Email Gateway Defense can result in mail being blocked for a variety of reasons including rate limits, spam, scoring, or content. To avoid this, you must archive mail directly to your archiving appliance or service and not through Email Gateway Defense. This can be accomplished by configuring a secondary connector on most hosted services and Microsoft Exchange. For details, see [Journaling Deployment Options](#).

If you need additional direction, contact [Barracuda Networks Technical Support](#).
