## How to Configure the System Email Notification Address

<https://campus.barracuda.com/doc/48203078/>

Some services on the F-Series Firewall can be configured to send email notifications. The configured email address is used for both the sender (to) and the source (from) in the notification emails.

### Services using system email notifications

---

- Advanced Threat Protection (ATP)

### Configure email notification

---

1. Go to **CONFIGURATION > Configuration Tree > Box > Administrative Settings**.
2. Click **Lock**.
3. In the left menu, select **Email Notifications**.
4. In the **Email Address** section, enter the address where all email notifications should be sent to.
5. In the **SMTP Server** field, enter the hostname or IP address of the SMTP server that should be used when sending email notifications.
6. Click **Send Changes** and **Activate**.

All services that are configured to send notifications will now send emails to the specified address if required.
