Factory-Shipped Templates

https://campus.barracuda.com/doc/49054303/

The Barracuda Web Application Firewall provides the following factory-shipped templates:

- **Joomla** – Supports the applications hosted on the Joomla framework.
- **Drupal** – Supports the applications hosted on the Drupal framework.
- **WordPress** – Supports the applications hosted on the WordPress CDN framework.
- **OpenCart** – Supports the applications hosted on the OpenCart framework.
- **PrismWeb** – Supports the applications hosted on the PrismWeb framework.
- **osCommerce** – Supports the applications hosted on the osCommerce framework.
- **Magento** – Supports the applications hosted on the Magento framework.
- **Typo3** – Supports the applications hosted on Typo3 framework.

These templates consist of a service object, a security policy, and trusted hosts that are preloaded with all the required policy configurations. When using these templates, you must specify the service details (IP address/port), server details (IP address/port), and trusted host IP address/addresses (if any). The rest of the configuration is added automatically. However, you can modify other values according to your requirements and use these templates.

The factory-shipped templates are available on the **ADVANCED > Templates** page, in the **Factory Shipped Templates** section. You can use these templates multiple times and create different applications on the Barracuda Web Application Firewall. For information on how to use the template, see "Using Templates" in the article Templates Version 2 .

> The factory-shipped templates are predefined templates. They cannot be downloaded, edited, or deleted.
