statcheck

https://campus.barracuda.com/doc/53248479/

To find and remove corrupt files from statistics trees, use the *statcheck* utility. Use the following syntax:

statcheck <option> <path>

Specify the path to the statistics tree. By default, it is located at */var/phion/stat*. If no option is specified, the statistics files are only checked for corruption (*-c* option).

In Barracuda NextGen Admin, you can view the log for the *statcheck* utility:

Logs > **Reports** > **Statistics** > **statcheck**.

Options

You can use the following options with *statcheck*:

Option	Description
-h	Prints the help text that describes all possible options.
-c	Checks the statistics files for corruption.
-d	Enables verbose debug logging. Each data entry is logged.
-m	Moves corrupted statistics files to */var/phion/lost+found/stat*.
-r	Removes corrupted statistic files.
-s	Switches top statistics files from a weekly to monthly interval, if necessary.
-t	Enables tracing. For example, investigated and uncorrupted files are logged.
-v	Displays the version info for the given file.
