

How to Deploy an F-Series Firewall in AWS via CloudFormation Template

<https://campus.barracuda.com/doc/53676264/>

CloudFormation templates allow you to automate your deployments in AWS and make them more consistent. You can replicate the deployment multiple times for testing and production, or you can spin up additional environments in other regions.

CloudFormation Templates

CloudFormation templates are available for all our AWS reference architectures in the Barracuda Networks GitHub account: <https://github.com/barracudanetworks/ngf-aws-templates>.

Before You Begin

Verify that the AMI image IDs used in the CloudFormation template match the IDs for the NextGen Firewall image listed in the AWS Marketplace. The AMI disk images change for every released version. Each region has a separate AMI ID.

Step 1. Subscribe to NextGen Firewall in AWS Marketplace

To be able to deploy a NextGen Firewall image via the CloudFormation template, you must agree to the **Terms of Service** and subscribe to the image in the AWS Marketplace. You need to do this only once per account, but it must be done separately for PAYG and BYOL images.

1. Go to the AWS Marketplace: <https://aws.amazon.com/marketplace/>
2. Search for Barracuda NextGen Firewall.
3. Click on the **Barracuda NextGen Firewall F-Series PAYG** or **Barracuda NextGen Firewall F-Series BYOL** image.

Latest Version 7.0.0-672* (Other available versions)

Continue

You will have an opportunity to review your order before launching or being charged.

5. Click on the **Manual Launch** tab.

6. Click **Accept Software Terms**.

Launch on EC2:

Barracuda NextGen Firewall F-Series - PAYG

1-Click Launch
Review, modify and launch

Manual Launch
With EC2 Console, API or CLI

Click "Accept Software Terms" to gain access to this Software

Once you accept these terms, you will have access to this software in any supported region. You can then launch the AMIs listed below directly from the EC2 console, EC2 APIs, or with other AWS management tools.

Price for your Selections:
Price will be dependent on usage

Accept Software Terms

You will be subscribed to this software and agree that your use of this software is subject to the pricing terms and the seller's End User License Agreement (EULA) and your use of AWS services is subject to the AWS Customer Agreement.

You will now receive an email from Amazon confirming your subscription. You can now use the provided AMI in your CloudFormation templates.

✓ **Thank you for subscribing to Barracuda NextGen Firewall F-Series - PAYG**

Software and AWS hourly usage fees apply when the instance is running and will appear on your monthly bill.

Step 2. (BYOL only) Create Stack Policy to Protect Firewall Instance from Stack Updates

Protect your firewall instances from being replaced during stack updates use a stack policy when deploying the CloudFormation template. Replacing the instance automatically invalidates your license. If your license is invalidated, contact Barracuda technical support during the 15 day grace period to transfer your license to the instance.

Step 3. Deploy the CloudFormation Template

CloudFormation templates can be deployed via the AWS web console, CLI, REST, or PowerShell.

1. Log into the AWS console.
2. Click **Services** and select **CloudFormation**.
3. Click **Create Stack**

The screenshot shows the AWS CloudFormation console. The 'Create Stack' button is highlighted with an orange border. Other buttons visible are 'Actions' and 'Design template'. Below these are filters for 'Filter: Active' and 'By Name:'.

4. Select **Upload a template to Amazon S3**.
5. Click **Browse** and select the template file.

The screenshot shows the 'Choose a template' section of the AWS CloudFormation console. It includes a description: 'A template is a JSON-formatted text file that describes your stack's resources and their properties. [Learn more.](#)'. There are three options: 'Select a sample template' (radio button), 'Upload a template to Amazon S3' (radio button, selected), and 'Specify an Amazon S3 template URL' (radio button). The 'Upload a template to Amazon S3' option has a 'Browse...' button highlighted with an orange border. The text 'SingleNGF.cftemplate' is visible next to the 'Browse...' button.

6. Click **Next**.
7. Enter the **Stack name**.
8. (optional) If the template includes parameters, fill in the values in the **Parameters** section.

Specify Details

Specify a stack name and parameter values. You can use or change the default parameter values, which are defined in the AWS CloudFormation template. [Learn more.](#)

Stack name

Parameters

KeyName
Name of an existing EC2 KeyPair to enable SSH access to the instances

9. Click **Next**.

10. (optional) Enter **Tags** for your stack.

11. In the **Advanced** section, set additional options for your stack:

- **Notification options**
- **Timeout** – Set the timeout in minutes.
- **Rollback on failure** – When set to **yes**, the deployment will be rolled back if any errors are encountered.
- **Stack policy** – For BYOL images, it is highly recommended to protect the firewall instance from stack updates.

Stack updates that require redeploying the firewall instance will invalidate the license for BYOL firewalls.

12. Click **Next**.

13. Review the settings and click **Create**.

The resources defined in the template are now deployed. This may take a couple of minutes. When the **Status** column shows **CREATE_COMPLETE**, the template has been deployed successfully. If the firewall fetches a PAR file from a Control Center, it may take a couple of minutes for the firewall to be available.
