About Generating API Credentials

https://campus.barracuda.com/doc/54853951/

Requirement: You must have a portal account with ECHOplatform Admin permissions to use this feature.

You can generate Client ID and Client Secret API credentials in the ECHOplatform for use with other applications (Managed Workplace, Automate, Continuum, etc.).

These credentials are valid until you delete them.

The Copy feature allows you to paste either Client ID or Client Secret to your clipboard to make it easier to enter into another application.

Important: you must copy and save the Client Secret elsewhere *immediately* because it only displays until the page is refreshed.

See:

Generating API Credentials

Renewing the Client ID and the Client Secret

Deleting the Client ID and the Client Secret
