## How to Create Custom Applications

<https://campus.barracuda.com/doc/5799942/>

On the **Applications** page, view and define applications that can be used in firewall and Quality of Service rules. An application is a combination of a protocol and one or more ports. You can create new applications or use the predefined ones, such as DNS, Email, and HTTP. The **Custom Applications** table displays any applications that you have defined.

### Create an Application

---

To create an application, complete the following steps:

1. Log into the Barracuda Link Balancer web interface.
2. Go to the **POLICY > Applications** page.
3. In the **Application** field, enter a descriptive name for the application.
4. Select the desired protocol from the **Protocol** list.
5. In the **Port Range** field, enter one port, a list of comma-separated ports or a hyphenated range.
6. Click **Add**.
7. Click Save **Changes**.

As soon as the application is created it will show up in the **Application** list.
