

Security Warnings

<https://campus.barracuda.com/doc/58490939/>

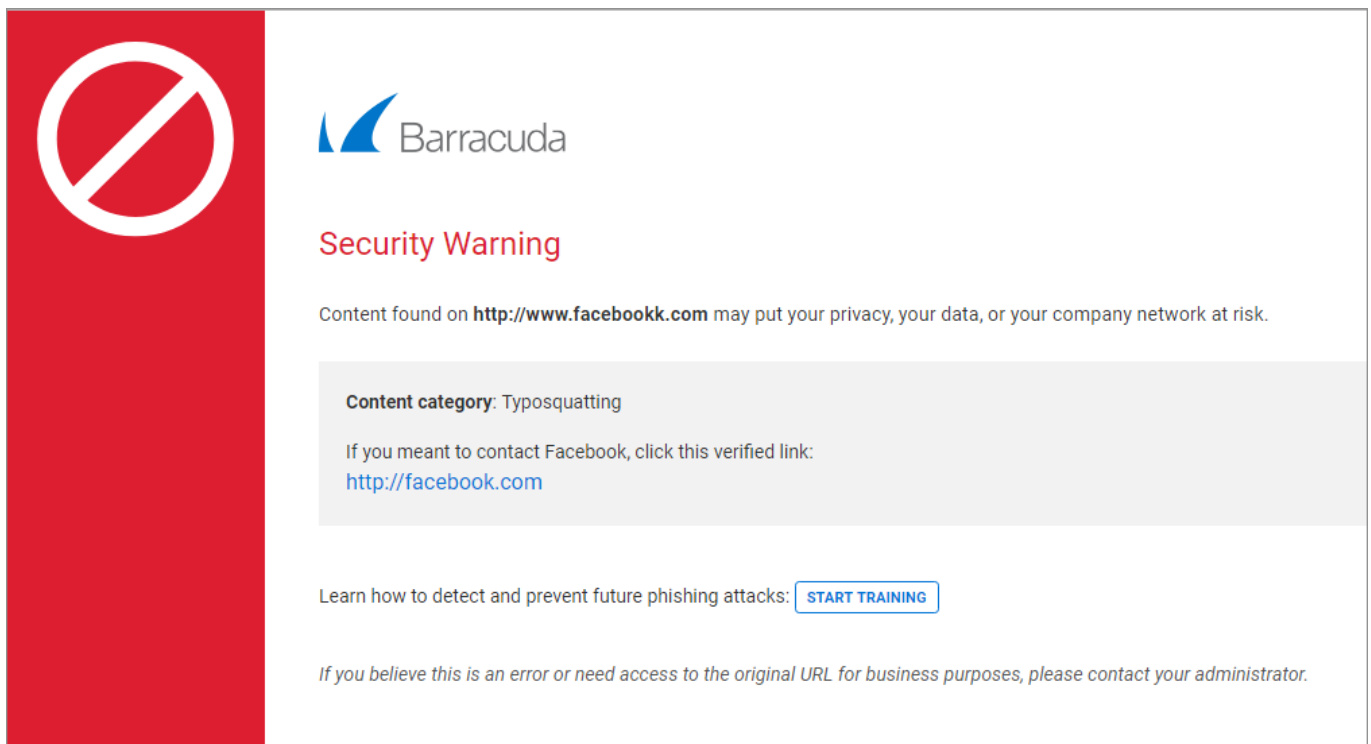

When the Barracuda Email Security Service determines an embedded web link is fraudulent or inappropriate, a security warning displays onscreen with the available actions.

Blocked Categories

Blocked categories include:

- Hacking
- Phishing Attacks
- Spam
- Typosquatting
- Spyware
- Malicious Sites

When a link containing a blocked category is detected, a **Security Warning** displays. For example:

The screenshot shows a security warning interface. On the left is a red vertical bar with a white circle and a diagonal slash. To the right, the Barracuda logo is at the top. Below it, the text 'Security Warning' is displayed in red. A message states: 'Content found on <http://www.facebookk.com> may put your privacy, your data, or your company network at risk.' Below this, a grey box contains the text 'Content category: Typosquatting' and 'If you meant to contact Facebook, click this verified link: <http://facebook.com>'. At the bottom, there is a link to 'START TRAINING' and a note: 'If you believe this is an error or need access to the original URL for business purposes, please contact your administrator.'

If a typosquatted link is detected in a user's email, the **Security Warning** page displays the fraudulent or inappropriate link (which cannot be clicked) and supplies a verified link to the valid

domain.

Learn to Detect and Prevent Future Attacks

There are short, end-user training exercises integrated into the Security Warnings to help users understand what they did wrong and teach them how to identify threats in the future.
