

## Release Notes Version 6.1.0.004

<https://campus.barracuda.com/doc/68356628/>

Before installing any firmware version, back up your configuration and read all release notes that apply to versions more recent than the one currently running on your system.

**Do not manually reboot your system at any time during an update unless otherwise instructed by Barracuda Technical Support.** Depending on your current firmware version and other system factors, updating can take up to 10 minutes. If the process takes longer, contact Barracuda Technical Support for further assistance.

### Known Issues

- In the High Availability environment, deleting a Layer 4 service or editing the server associated with the Layer 4 service in the Passive unit is not handled properly in the backend. It is recommended to perform these operations on the Active unit. [BNADC-5795]
- Due to known issues, the SSL hardware option is disabled in the Barracuda Load Balancer ADC 640 and 840. The administrator can manually enable the SSL hardware functionality (if required). [BNADC-8689]

### Fixes

- False Energize Update Expired alert emails are not generated when the unit is offline. This issue has been addressed. [BNADC-8599]
- Adding a new line in the **Comments** text box for **Attack Types** resulted in a configuration rollback. This issue has been addressed. [BNADC-8614]
- The data path crash when the **Response Body Rewrite** rule was configured for a service, has been fixed. [BNADC-8656]
- The data path crash in HTTP2 traffic has been fixed. [BNADC-8657]
- A GET query for service groups can now be executed without a forward slash in the REST API URL. [BNADC-8702]
