Google Cloud Deployment

https://campus.barracuda.com/doc/68357061/

The F-Series Firewall can be deployed to the Google Cloud Platform to secure and connect your cloud resources. The NextGen Firewall can be deployed either by uploading the disk image available from the Barracuda Networks download portal, or by using the marketplace image in Google Launcher.

Deploy via Google Launcher

You can deploy the latest firmware version of the F-Series Firewall directly from Google Launcher. You must bring your own licenses (BYOL), PAYG images are not available.

For more information, see How to Deploy the F-Series Firewall in the Google Cloud via Google Launcher.

Manually upload an image and deploy

If you need to deploy a firmware version of the F-Series Firewall that is not available through Google Launcher, you can manually upload and deploy the firewall images. The firewall images for each firmware version that is supported for Google Cloud is available in the Barracuda Download portal.

For more information, see How to Manually Upload and Deploy the F-Series Firewall in the Google Cloud.

Accessing the serial console in Google Cloud

The Google Cloud Platform allows to to enable and connect to the serial port of your firewall instance. This feature allows you to troubleshoot your F-Series Firewall in case of a misconfiguration in a interactive, web-based serial console.

For more information, see How to Access the Serial Console on the F-Series Firewall in the Google Cloud.
