

Understanding the Local Configuration Store

<https://campus.barracuda.com/doc/68359934/>

In PST Enterprise version 5.2 and higher, there is a set of configuration files stored locally on each machine where one or more of the following PST Enterprise components are installed:

- PST Enterprise administration website and core components
- PST Enterprise Copy Agent

These configuration files form the Local Configuration Store (LCS). There are some settings in these files that you may need to modify in order to reconfigure PST Enterprise to work with specific settings in your environment. The LCS files are stored in the following location:

\ProgramData\Barracuda\PSTEnterprise\LocalConfigurationStore

This location contains the individual **.ini** files and a **README.txt** file containing a brief overview of the LCS.

Configuration Files

The following table lists the configuration files present in the LCS.

File Name	Description	Warnings
Agent.ini	Contains settings for the PST Enterprise Copy Agent Service behavior.	
Hub.ini	Contains settings for the PST Enterprise Hub Service behavior.	
Install.ini	Contains settings used by the PST Enterprise installer.	
Spoke.ini	Contains settings for the PST Enterprise Spoke Service behavior.	
System.ini	Contains settings used by the PST Enterprise core installation.	<i>Do not modify</i>
Web.ini	Contains settings for the PST Enterprise administration and self service websites behavior.
