
Viewing the Task Manager

<https://campus.barracuda.com/doc/69960162/>

The **BASIC > Task Manager** page provides a list of tasks that are in the process of being performed, and displays any errors encountered when performing these tasks. Barracuda Cloud Control tracks tasks including configuration restoration.

If a task takes a long time to complete, you can click the **Cancel** link next to the task name and then run the task at a later time when the system is less busy. The Task Errors section lists an error until you manually remove it from the list; errors are not automatically phased out over time.

View Task Errors

Any task that results in an error is listed in the **Task Errors** section, with a red **Error Summary** link to this list present on every page in the web interface as long as there are errors in this list. Click on the **Clear** link to remove errors, since all errors remain in this list until explicitly removed.
