

Synchronizing Security Policies Across Products

<https://campus.barracuda.com/doc/69960185/>

You have four Barracuda Web Application Firewalls serving three locations: New York, San Francisco and London. Your master Security Policies database dictates that all devices should have the **HttpOnly** attribute set to *Yes* for cookies, preventing the cookie from being accessed by client-side scripts.

To configure,

1. Click on the group of Barracuda Web Application Firewalls from the [Appliance Control Dashboard](#), and check the **SECURITY POLICIES > Cookie Security** page. An [exception](#) triangle for this setting may display, as shown in the image below, if the devices are not in sync for this setting.
2. Hover the mouse over the setting to view the values for **Http Only** on each device in the pop-up table:

The screenshot shows the 'HTTP Only' setting with radio buttons for 'Yes' (selected) and 'No'. A yellow warning triangle is present. Below it, the 'Allow Unrecognized Cookies' setting has radio buttons for 'Never', 'Always', and 'Custom' (selected). A tooltip message reads: 'Adds the "HttpOnly" attribute to cookies, preventing them from being accessed by client-side scripts. **Recommendation:** Set to Yes for all devices.' A table below the tooltip shows the following data:

Unit	Value
WAF: NYC [242165]	No
WAF: San Francisco #1 [242315]	Yes
WAF: San Francisco #2 [242317]	Yes
WAF: London [244327]	No

To resolve an exception,

1. To resolve the issue, click on the NYC and London Web Application Firewalls, successively, in the [Appliance Control Tree](#), and change the settings to match those of the two San Francisco systems.
2. Once you save those settings, the exception triangle no longer displays next to the setting when viewed in the [Group context](#).
