Barracuda Sentinel is a comprehensive artificial intelligence (AI) solution for real-time spear phishing and cyber fraud defense. It is delivered as a cloud service. Barracuda Sentinel utilizes artificial intelligence to protect people, businesses, and brands from spear phishing, impersonation attempts, business email compromise (BEC), and cyber fraud.

The three main components of Barracuda Sentinel include:

- A multi-layer AI engine that detects and blocks spear phishing attacks in real time and identifies which employees are at highest risk of spear phishing
- Domain Fraud Protection that delivers visibility and analysis of DMARC reports, which prevent phishing and brand hijacking and ensure deliverability of legitimate email traffic
- Ability to detect account takeover attempts and block email attacks launched from compromised accounts.

Deployment is simple with no impact on network performance, email delivery, or user experience. Barracuda Sentinel connects directly to communications platforms via API, and works alongside existing email security solutions, including native Microsoft Office 365, Barracuda Essentials, or any other email security solutions. Barracuda Sentinel is available today for Microsoft Office 365 users.
