

Release Notes Version 9.0.1 Cloud

Please Read Before Updating

Before updating to a new firmware version, be sure to back up your configuration and read the release notes for each firmware version which you will apply.

Do not manually reboot your system at any time during an update, unless otherwise instructed by Barracuda Networks Technical Support. The update process typically takes only a few minutes to apply. If the process takes longer, please contact [Barracuda Networks Technical Support](#) for assistance.

Fixes and Enhancements in 9.0.1 Cloud

Cloud Hosting

When using BYOL Autoscaling with the Barracuda Web Application Firewall on AWS, the licenses should be activated prior to setting up the deployment. Activation can be done [here](#). [BNWF-26482]

- Feature: When deploying with CloudFormation Templates, it is now possible to irreversibly disable to default local "admin" user account [BNWF-26120]
- Feature: The Barracuda Web Application Firewall on Microsoft Azure can now support multiple NIC's (LAN and WAN), and multiple IP addresses per NIC. [BNWF-25857]
- Feature: Support for Microsoft Operations Management suite is now available on the Barracuda Web Application Firewall. An ARM Template to create the OMS workspace is also available for easy deployment. [BNWF-25180]
- Feature: Configuration backup (including scheduled backup) to AWS S3 is now possible with the Barracuda Web Application Firewall [BNWF-25157]
- Enhancement: LDAP groups can now be assigned to admin roles when setting up Role Based Administration on the Barracuda Web Application Firewall [BNWF-25649]
- Fix: The 'webconconf' related ACL is now visible ONLY in public cloud Barracuda Web Application Firewall instances. This ACL rule can be edited under System > ACL > Auto Created Network ACLs in the ADVANCED > Advanced Networking page. [BNWF-21281]
