

## How to Configure NGF Local Authentication

<https://campus.barracuda.com/doc/72515891/>

If you do not have an external authentication service available, you can create and maintain a list of local users and groups on the CloudGen Firewall. You can refer to these users and groups when creating firewall rules, VPN tunnels, or when configuring the captive portal.

### Configure NGF Local Authentication

1. Go to **USERS > Local Authentication**.
2. In the **Local Users and Groups** table, configure the following settings for each user:
  - **Username** - Log-in name for the user.
  - **Password** - The user's password.
  - **Group** - Name of the user group this user belongs to.

Ensure that you enter the correct group names. If you misspell a group name (e.g., tst instead of test), a new group is created and permissions are not applied correctly to the group.

LOCAL USERS AND GROUPS			
Username	Password	Group	
<input type="text"/>	<input type="text"/>	<input type="text"/>	Add
localuser	.....	group	

3. Click **Add**.
4. Click **Save**.
