

How to Configure an Outlook Web Access Web App

<https://campus.barracuda.com/doc/73700058/>

To give your end users direct access to their corporate email resources, configure an Outlook Web Access / Outlook Web App (OWA) resource. The SSL VPN offers preconfigured Web App templates for Outlook Web Access 2003, 2007, 2010, and 2013. By default, the session username and password is used to authenticate on the Outlook Web Access portal. If the user must use a different password or user to sign in, create user attributes to replace the session attributes.

Before You Begin

Enable and configure SSL VPN on the firewall. For more information, see [How to Configure the SSL VPN Service](#).

Configure an Outlook Web Access Web App (OWA)

1. Go to **VPN > SSL VPN**.
2. Click the **Resources** tab.
3. In the **Proxied Web Apps** section, click **Add Proxied Web App**. The **Add Proxied Web App** window opens.
4. Set **Enable** to **Yes**.
5. (optional) Click **Browse** to upload a PNG file for the web portal. It must be less than 30 kB and no larger than 80x80 pixels.
6. Select the **OWA** template matching your Exchange server from the **Web App Template** drop-down list. A pop-up window appears, asking for the server name.
7. Enter the FQDN, hostname, or IP address for your Microsoft Exchange server, and click **OK**.

8. (OWA 2003 only) Enter the single sign-on (SSO) domain for your Exchange server, and click **OK**.
9. Enter the visible **Name** for the Web App. This is the name displayed for the user in the web portals and CudaLaunch.

Add Proxied Web App ?

Enable: Yes No

Icon:
PNG File, less than 30kB and not bigger than 80x80 pixel.

Name:

Web App Template:

Root URL:

Launch Path:

- (optional) In the **Allowed Hosts** list, add all servers that must be proxied by the SSL VPN when accessing this Web App. Enter **Name**, **Root URL**, and **Launch Path** in the **Allowed Hosts** section, and click +.
- (optional) To restrict access to the Web App by user group, remove the * entry in the **Allowed User Groups** list. Enter the user groups that can access the Web App, and click + after each entry. If no groups are added, the Web App cannot be accessed. Use question marks (?) and asterisks (*) as wildcard characters.
- (optional) In the **Single Sign On** section, change the session attribute for user attributes to enable SSO if your OWA username and password differ from the session username and password. For more information on how to create user attributes, see [How to Use and Create Attributes](#).
- Click **Save**.
