
Hyper-V Rapid Recovery

<https://campus.barracuda.com/doc/73700292/>

Applicable Products

These instructions apply to the following products:

- Barracuda Intronis Backup - MSP

Overview

Rapid Recovery is a restore option that allows you to recover a failed system as a Hyper-V virtual machine in fifteen minutes or less from local storage.

The major benefit of Hyper-V Rapid Recovery is the new set of recovery options afforded to the small business to recover from any local business outage. Each option covers specific customer use cases and insures against business downtime. These options include:

- Rapid Recovery – recovery-in-place
- Rapid Recovery – object-level recovery
- Copy-mode recovery

[Rapid Recovery – Recovery-in-Place](#)

The main Rapid Recovery option for these backups is a recovery-in-place, in which your Hyper-V files are made available very quickly so that they can be imported into Hyper-V Manager and booted

[Rapid Recovery – Object-level Recovery](#)

This option allows you to recover individual files and folders from a customer's local Hyper-V backup directly through the management portal. This feature allows granular restore of data in protected Hyper-V VMs without having to mount the disks and explore their contents through Windows explorer.

Copy-mode Recovery

You also can do a full-copy restore of VM data to another location. This type of restore is useful for providing a more permanent recovery solution. The full contents of the VM's disks (not just a differencing disk) are copied to a location that can serve as better permanent storage from which to run a production VM. This restore is useful for getting a copy of a VM from a certain point-in-time to

either run or store elsewhere.
