

Example - Client-to-Site IKEv2 IPsec VPN

<https://campus.barracuda.com/doc/73719148/>

Use an IPsec IKEv2 client-to-site VPN to let mobile workers connect securely to your Barracuda CloudGen Firewall with a standard compliant IKEv2 VPN client.

Supported VPN Clients

Although any standard-compliant IPsec IKEv2 client should be able to connect via IPsec, Barracuda Networks recommends using the following clients:

- Windows 8/10 native IKEv2 IPsec VPN client
- Windows 10 Mobile 10.0.14393

Android and iOS devices are currently not supported.

Before You Begin

- Set up the VPN certificates for external CA. For more information, see [How to Set Up External CA VPN Certificates](#).
- Configure MS-Chapv2 authentication. For more information, see [How to Configure MS-CHAP Authentication](#).
- Identify the subnet and gateway address to use for the VPN service in your network (e.g., 192.168.6.0/24 and 192.168.6.254).
- Identify the IPv4 and IPv6 addresses the VPN service is listening on. If you are using a dynamic WAN IP, see [How to Configure VPN Access via a Dynamic WAN IP Address](#).
- If you are using a Windows phone, you must install the root certificates on the phones certificate store.

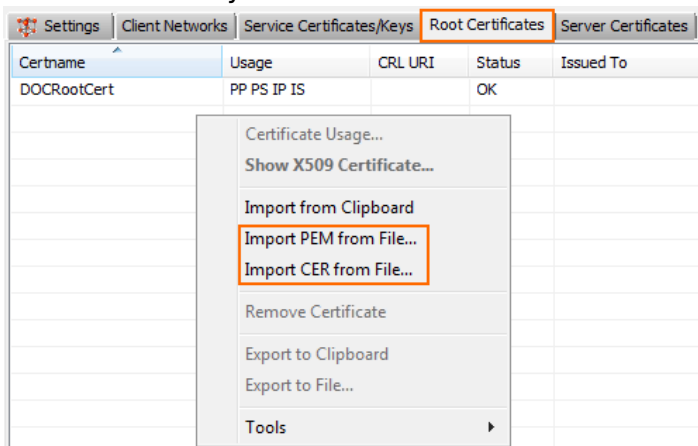

Step 1. Create VPN Certificates

1. Create a root and VPN certificates with the following requirements for the VPN server certificate:
 - CN - Set to the FQDN or your VPN service. The FQDN must resolve to the IP address the VPN service is listening on.
 - SubAltName (SAN) - Must be the same as the the CN.
 - keyUsage = nonRepudiation, digitalSignature, keyEncipherment,
 - extendedKeyUsage = 1.3.6.1.5.5.8.2.2,serverAuth

You should now have a root certificate in CER or PEM format and a VPN certificate in PKCS12, CRT, or PEM format.

Step 2. Add Certificates to VPN Settings

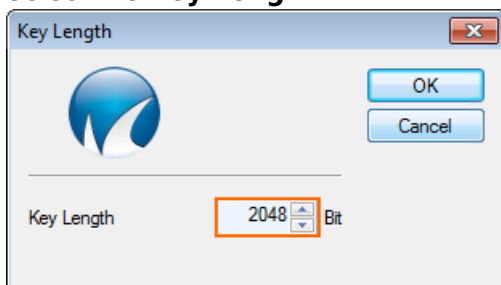

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > VPN Settings** .
2. Click **Lock**.
3. Click on the **Root Certificates** tab.
4. Right-click the table and click on **Import CER from File** or **Import PEM from File**, depending on the format of your root certificate.

5. Select and upload the root certificate created in step 1.
6. Click on the **Sever Certificates** tab.
7. Right-click the table and click on the **Import Certificate** menu item matching your VPN server certificate.

8. Select and upload the VPN certificate created in step 1.
9. Click on the **Service Certificates/Keys** tab.
10. Right-click the table and select **New Key**.
11. Enter a **Key Name**.
12. Select the **Key Length**.

13. Click **OK**.
14. Click **Send Changes** and **Activate**.

Step 3. Create the VPN Client Network

All VPN clients will receive an IP address from the VPN client network with a static gateway. You can choose the gateway IP address freely from the subnet.

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > VPN Settings**.
2. Click **Lock**
3. Click the **Client Networks** tab.
4. Right-click the table and select **New Client Network**. The **Client Network** window opens.
5. In the **Client Network** window, configure the following settings:
 - **Advertise Route** - Enable check box to include the VPN network in the OSPF or BGP network
 - **Name** - Enter a descriptive name for the network.
 - **Network Address** - Enter the base network address for the VPN clients.
 - **Network Mask** - Enter the subnet mask for the VPN client network.
 - **Gateway** - Enter the gateway network address.
 - **Type** - Select **routed (Static Route)**. VPN clients are assigned an address via DHCP (fixed or dynamic) in a separate network reserved for the VPN. A static route on the

firewall leads to the local network.

6. Click **OK**.
7. Click **Send Changes** and then click **Activate**.

Step 4. Configure IKEv2 Phase 1 and 2

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > Client to Site**.
2. Click **Lock**.
3. Click the **External CA** tab.
4. Clear the **Hide Advanced Configuration** check box.

5. Click the **IPsec** sub-tab.

6. In the **IKEv2 Phase 1 (default)** section, double-click on the Phase 1 encryption settings. The **Change IPsec Phase 1** window opens.
7. Configure the **IPsec Phase I** encryption settings:
 - **Encryption** - Select **AES256**.
 - **Hash Meth** - Select **SHA**.
 - **DH-Group** - Select **Group 2**.
8. (optional) Set the IPsec Phase 1 **Lifetime** settings:
 - **Time** - Enter 3600
 - **Minimum** - Enter 1200
 - **Maximum** - Enter 4800
9. Click **OK**.

Change IPsec Phase 1 Settings

10. Right-click in the **IKEv2 Phase 2** table and select **New IKEv2 Phase II**. The **IPsec IKEv2 Phase II** windows opens.
11. Enter a **Name**.
12. Configure the IPsec phase 2 encryption settings:
 - **Encryption** - Select **AES256**.
 - **Hash Meth** - Select **SHA**.
 - **DH-Group** - Select **Group 2**.
13. (optional) Set the IPsec Phase 2 **Lifetime** settings:
 - **Time** - Enter 3600
 - **Minimum** - Enter 1200
 - **Maximum** - Enter 4800
14. Click **OK**.

15. Click **Send Changes** and **Activate**.

Step 5. Configure VPN Common Settings

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > Client to Site**.
2. Click **Lock**.
3. Click on the **External CA** tab.
4. Click on the **Common** sub-tab.
5. Right-click the table and select **New Common**. The **Common Settings** window opens.
6. Enter a **Name**.
7. (optional) Enter a **Statistic Name**. For more information, see [Statistics](#).
8. From the **Assigned Network** drop-down list, select the VPN network created in step 3.
9. (optional) Enter the **DNS** server IP address.
10. (optional) Enter the **WINS** server IP address.
11. Enter the **Network Routes** that should be sent through the VPN tunnel and click **Add**. To send all traffic through the VPN tunnel, enter **0.0.0.0/0**.
12. (optional) To limit the source from which VPN connections are accepted, add the IP addresses or subnets to the **Access Control List (ACL)**.

13. Click **OK**.
14. Click **Send Changes** and **Activate**.

Step 6. Configure a VPN Group Policy

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > Client to Site**.
2. Click **Lock**.
3. Click on the **External CA** tab.
4. Click on the **Policy** sub-tab.
5. Right-click in the table and select **New Policy**. The **Group VPN Policy** window opens.
6. Enter a **Name**.
7. In the **Common** tab, select the VPN common settings you created in step 5 from the **Link to** drop-down list.

8. Click the **IPsecIKEv2** tab.
9. Select the IPsec IKEv2 Phase 2 settings from the **Link to** drop-down list.

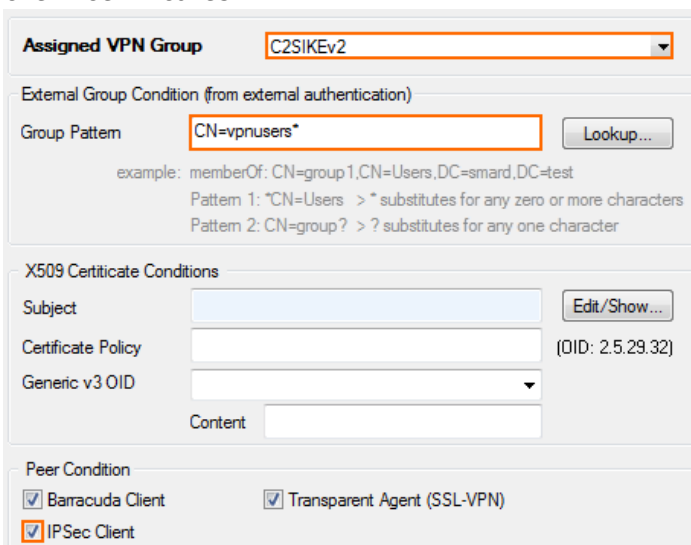

Link to		IKEv2PhaseII	Edit...	New...
Name	:	IKEv2PhaseII		
Disabled	:	No		
Encryption	:	AES256		
Hash Meth.	:	SHA		
DH-Group	:	Group 2		
Lifetime				
Time	:	3600		
Minimum	:	1200		
Maximum	:	4800		

10. Click **OK**.
11. Click **Send Changes** and **Activate**.

Step 7. Configure VPN Rules

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > Client to Site**.
2. Click **Lock**.
3. Click on the **External CA** tab.
4. Click on the **Rules** sub-tab.
5. Right-click in the table and select **New Rule**. The **Group Policy Condition** window opens.
6. From the **Assigned VPN Group** list, select the group VPN policy created in step 6.
7. (external authentication only) Enter a **Group Pattern** to define the groups that will be assigned the policy. E.g.: CN=vpnusers*
8. In the **Peer Condition** section, verify that **IPsec Client** check box is selected.
9. (optional) In the **X509 Certificate Conditions** section, enter matching conditions for the X509 client certificates.

Assigned VPN Group	C2SIKEv2	
External Group Condition (from external authentication)		
Group Pattern	CN=vpnusers*	Lookup...
example: memberOf: CN=group1,CN=Users,DC=smard,DC=test		
Pattern 1: *CN=Users > * substitutes for any zero or more characters		
Pattern 2: CN=group? > ? substitutes for any one character		
X509 Certificate Conditions		
Subject		Edit/Show...
Certificate Policy		(OID: 2.5.29.32)
Generic v3 OID		
Content		
Peer Condition		
<input checked="" type="checkbox"/> Barracuda Client	<input checked="" type="checkbox"/> Transparent Agent (SSL-VPN)	
<input checked="" type="checkbox"/> IPsec Client		

10. Click **OK**.
11. Click **Send Changes** and **Activate**.

Step 8. Configure Group VPN Settings

1. Go to **CONFIGURATION > Configuration Tree > Box > Virtual Servers > your virtual server > Assigned Services > VPN-Service > Client to Site**.
2. Click **Lock**.
3. Click on the **External CA** tab.
4. Click the **Click here for options** link.

5. From the **Authentication Scheme** drop-down list, select **Default Authentication Scheme**.
6. From the **Default Authentication Scheme** drop-down list, select **msad**
7. From the **Server** drop-down list, select the VPN server certificate uploaded in step 2.
8. From the **Server Protocol Key** drop-down list, select the service certificate created in step 2.
9. From the **Used Root Certificates** drop-down list, select the root certificate uploaded in step 2.
10. Click **OK**.
11. Click **Send Changes** and **Activate**.

Step 9. Add access rules

Add an access rule to connect your client-to-site VPN to your network.

For more information, see [How to Configure an Access Rule for a Client-to-Site VPN](#).

Monitoring VPN Connections

On the **VPN > Client-to-Site** page, you can monitor VPN connections. The page lists all available client-to-site VPN tunnels. In the **Tunnel** column, the color of the square indicates the status of the VPN:

- **Blue** – The client is currently connected.
- **Green** – The VPN tunnel is available, but currently not in use.
- **Grey** – The VPN tunnel is currently disabled. To enable the tunnel, right-click it and select **Enable Tunnel**.

For more information about the **VPN > Client-to-Site** page, see [VPN Tab](#).

Troubleshooting

To troubleshoot VPN connections, see the `/yourVirtualServer/VPN/IKEv2` log file. For more information, see [LOGS Tab](#).

Next Step

Configure the remote access clients to connect to the client-to-site VPN.

For more information, see [Remote Access Clients](#).
