

Control Center CC Firewall

<https://campus.barracuda.com/doc/73719438/>

In some cases, a firewall service is needed on the box level of the Firewall Control Center. The firewall service has the same features as the firewall service on a CloudGen Firewall, except for Virus Scanning, URL Filtering and ATP. The CC firewall provides better and more granular security against unauthorized access to Control Center services than the CC Access Control list.

Create a CC Firewall Service

The CC firewall service is created and managed on the box layer of the Control Center.

- For more information on how to create a service, see [How to Configure Services](#).
- For more information on firewall configuration, see [Forwarding Firewall](#).
