

## How to Update the BIOS on the CloudGen Firewall

<https://campus.barracuda.com/doc/73719715/>

In some cases, [Barracuda Technical Support](#) may ask you to make a BIOS update on your CloudGen Firewall. Barracuda Technical Support will send you an email containing a BIOS update ZIP file for your model. To make a BIOS update on your CloudGen firewall, create a bootable FreeDOS USB drive, copy the BIOS update file to the USB drive, and trigger the update from the command line.

Do NOT update the BIOS unless directly instructed to do so by [Barracuda Technical Support](#).

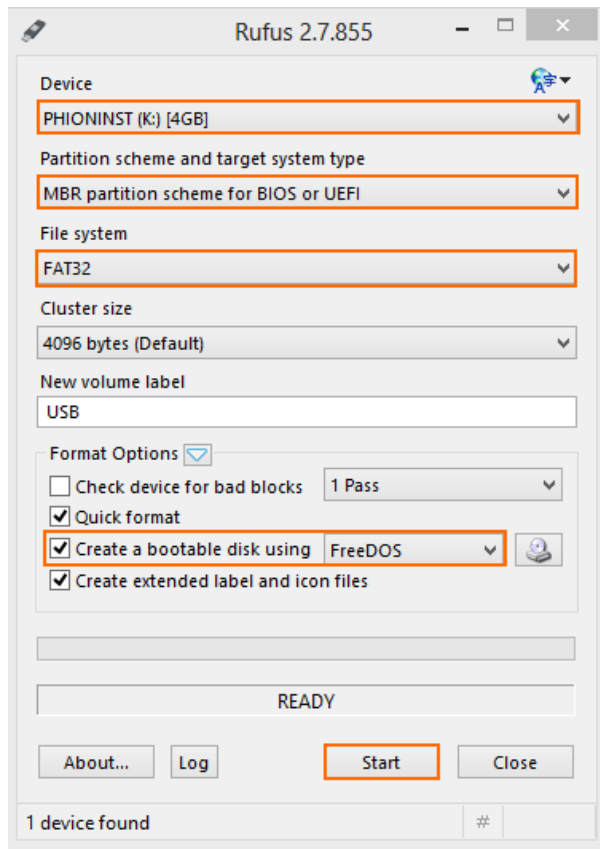

### Before You Begin

- Download Rufus: <https://rufus.ie/>

### Step 1. Create a Bootable FreeDOS USB Drive

You must create a bootable FreeDOS USB drive to be able to update the BIOS.

1. Plug in your USB drive.  
All data on the USB will be lost.
2. Launch Rufus.
3. Configure a bootable FreeDOS USB drive:
  - **Device** – Select your USB drive.
  - **Partition scheme** – Select **MBR partition scheme for BIOS or UEFI**.
  - **File system** – Select **FAT32**.
  - Select **Create a bootable disk** and select **FreeDOS** from the drop-down list.

4. Click **Start**.

## Step 2. Copy the BIOS Update File to the USB Drive

- Unpack the ZIP file containing the BIOS update and copy the content to the USB drive.

## Step 3. Boot from USB Stick and Update the BIOS

Boot your firewall with the USB stick, and then trigger the BIOS update from the command line.

1. Shut down the Firewall.
2. Plug the USB stick into the appliance
3. Boot the appliance.
4. At the prompt, change into the directory with the BIOS update.
5. Enter `FLASH.BAT`
6. Reboot the firewall.

The BIOS of your firewall is now updated.
