

User Objects

<https://campus.barracuda.com/doc/75696477/>

The **Users** view allows you to view and configure user objects. User objects restrict access rules to specific users and user groups. When creating a user object, you can include (reference to) other user objects that are already configured. A user object is also automatically created whenever a connection attempt is processed by the firewall. The object is then inserted into the corresponding rule. To access the **Users** window, click **Users** under the **Configuration** menu on the left.

User Objects [Local Machine]				
Firewall Summary History Live Activity Events	Name ▾	Referenced by	Entries	Comment
	Admin User	0		Administrative User
	Example 01	0		Example User 01
	Example 02	0		Example User 02
Configuration Settings Rules Adapters Networks Services Applications Users Rule Tester				

Create a User Object

1. Select **New** in the bottom bar or from the context menu in the **User Objects** window.
2. Specify a **Name** for the user object.
3. Optionally, insert a **Description**.
4. In the **User/Group** list, select your users / groups and click **New** to add them to the User list. In this list, the Microsoft Windows domain users and groups known to the Barracuda Personal Firewall are available for selection. If the Windows workstation is a member of a Windows domain, the domain user and group information can be retrieved from the Active Directory server by clicking **Update**.

Irrespective of the operating system's active language on the workstation, the following users will always be displayed in English:

- NT AUTHORITY\LOCAL SERVICE
- NT AUTHORITY\NETWORK
- NT AUTHORITY\NETWORK SERVICE
- NT AUTHORITY\SYSTEM

The internal firewall engine will transform these names to the appropriate language version. Do not insert them manually in a different language.

User	Type	Comment
NET\adminvirus	User	
NET\admins-services	User	

If applicable, specify a reference to the user object. Click **New** after each selection.

5. Click **OK**.

To save configuration changes made on the Barracuda CloudGen Firewall, click **Send Changes** and **Activate**. To save configuration changes made on the Barracuda Personal Firewall, use the option provided on the page, or click the **Alt** key, expand the **File** menu, and select **Save Configuration**.
