

## How to Uninstall the Barracuda NAC/VPN Client for Windows

<https://campus.barracuda.com/doc/75696543/>

To remove the Barracuda Network Access Client for Windows and all of its components from a system, use the Barracuda Network Access Client InstallShield Wizard or uninstall the application using the *Uninstall a Program* feature of the Windows Control Panel. After the uninstallation process, you may be prompted to restart the system.

Do not run the installation executable from a network share. Instead, copy the installation files to a local hard drive and run it from there. Otherwise, the uninstallation will fail because all network connections are terminated for a few moments during the installation process.

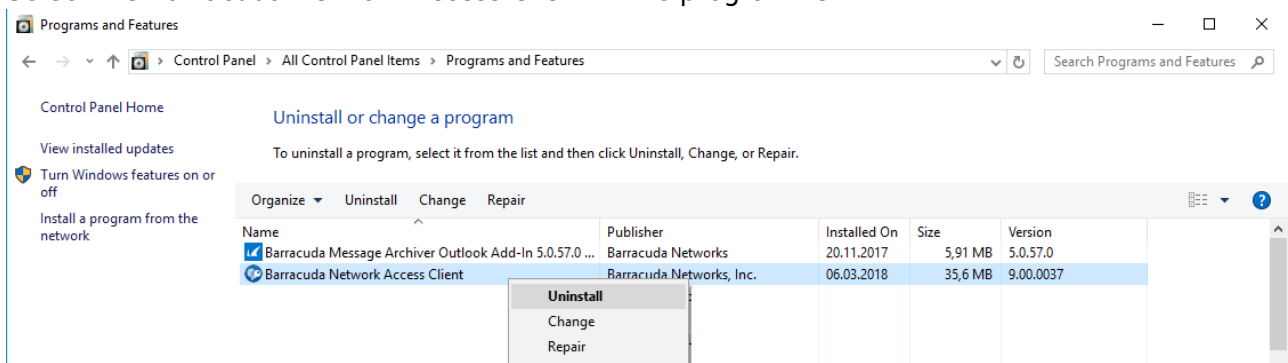

### Before You Begin

During the uninstallation process, all network connections will be interrupted for five seconds or longer. Before uninstalling Barracuda Network Access Client:

- Close any applications that may become unstable and save any open documents on network shares.
- Close all components of the Barracuda Network Access Client.

### Uninstalling the Client via the Control Panel

1. Open the Windows Control Panel.
2. Navigate to **Programs and Features**.
3. Select the Barracuda Network Access Client in the program list.

4. Double-click the item. You can also right-click it and select **Uninstall**.
5. Wait until the uninstallation has finished. If, however, you decided to keep the client, click **Cancel**.

---

After proceeding to 100%, the uninstall dialog disappears. The Barracuda Network Access Client and all of its components are completely removed from the system.
