
Adding or Removing a Component

<https://campus.barracuda.com/doc/76284717/>

Adding a Component

When you add a component, you can customize that particular feature's configuration.

To add a component:

1. Under **Applications**, click an application.
2. In the left navigation bar, click **Add Components**.
3. In the **Add Component** window, locate the component you want to add and click **Add**.
4. Repeat step 3 to add more components or close the window.

The component you added appears in the left navigation bar.

Removing a Component

When you remove a component, the settings associated with its feature are reset to a Barracuda-determined "best practice" configuration. You can always add the component again to customize the settings.

Note: When you remove a component, any data associated with that component is deleted and cannot be recovered, even if you add the component again.

To remove a component:

1. Under **Applications**, click an application.
2. In the left navigation bar, locate the component you want to delete.
3. Hover over the component until three dots  become visible, indicating you can take action.
4. Click the three dots and click **Remove Component**.
