

## Config.add

<https://campus.barracuda.com/doc/76285052/>

This method adds the given values to the list variable. This method will not add values to tied variables, and a value added must not already exist in the list. For adding values to tied variables, use the config.create method.

### Parameters Allowed

The following parameters are used by the config.add method and should be provided as part of the request XML in the HTTP POST request:

- **password** – A required parameter which the API uses to authenticate access to a page and which is set by your administrator.
- **parent\_type** – A required parameter that tells the API about the class/scope of the parent container.
- **parent\_path** – A required parameter which is the qualified name of a parent object
- **variable** – A required parameter that specifies the variable for which values will be added.
- **values** – A required parameter specifying a list of values to be added.

### Example: Adding a value to a variable

Add values 192.168.128.34 and 192.168.128.2 to the mta\_trusted\_relay\_host list.

#### Arguments

- parent\_type: 'global'
- parent\_path: ''
- variable: 'mta\_trusted\_relay\_host'
- values: ['192.168.128.34', '192.168.128.2']

#### Sample Request

```
<?xml version="1.0" encoding="UTF8"?>
<methodCall>
  <methodName>config.add</methodName>
  <params>
    <param>
      <value>
        <struct>
```

```
<member>
<name>parent_type</name>
<value>
<string>
<! [CDATA[global]]>
</string>
</value>
</member>
<member>
<name>variable</name>
<value>
<string>
<! [CDATA[mta_trusted_relay_host]]>
</string>
</value>
</member>
<member>
<name>values</name>
<value>
<array>
<data>
<value>
<string>
<! [CDATA[192.168.128.34]]>
</string>
</value>
<value>
<string>
<! [CDATA[192.168.128.2]]>
</string>
</value>
</data>
</array>
</value>
</member>
<member>
<name>parent_path</name>
<value>
<string></string>
</value>
</member>
</struct>
</value>
</param>
</params>
</methodCall>
```
