

## Config.var\_attr

<https://campus.barracuda.com/doc/76285060/>

Use this method to list the attributes of the specified variable.

### Parameters Allowed

The following variables should be provided as part of the request XML in the HTTP POST request.

- **password** – A required parameter which the API uses to authenticate access to a page and which is set by your administrator.
- **domain** – A required parameter that specifies the variable for which attributes are required.

### Example: List the attributes and their values for global Block level.

This example lists the attributes of global blocking: min level, max level, current setting, etc. and returns the current value for each attribute.
