

How to Configure Barracuda DNS Nameservers on Windows 8

https://campus.barracuda.com/doc/78152431/

In order to use the Barracuda DNS Filtering Service, you must direct your computer(s) (laptop / desktop) to the assigned Barracuda Domain Name Server (DNS). The IP address for the Barracuda DNS nameservers are shown on the **Configure DNS** page of the **Add Location** popup, which you access on the **DNS FILTERING** page.

- 1. From the Windows 8 Desktop, right click the **Networks** icon and select **Open Network and Sharing Center.**
- 2. Click on your primary connection or Local Area Connection under Active Networks.
- 3. While in the **Open Network and Sharing Center,** click the current active connection or the connection that you want to configure the Barracuda nameserver on.
