

How to Configure Barracuda DNS Nameservers on Mac OS X

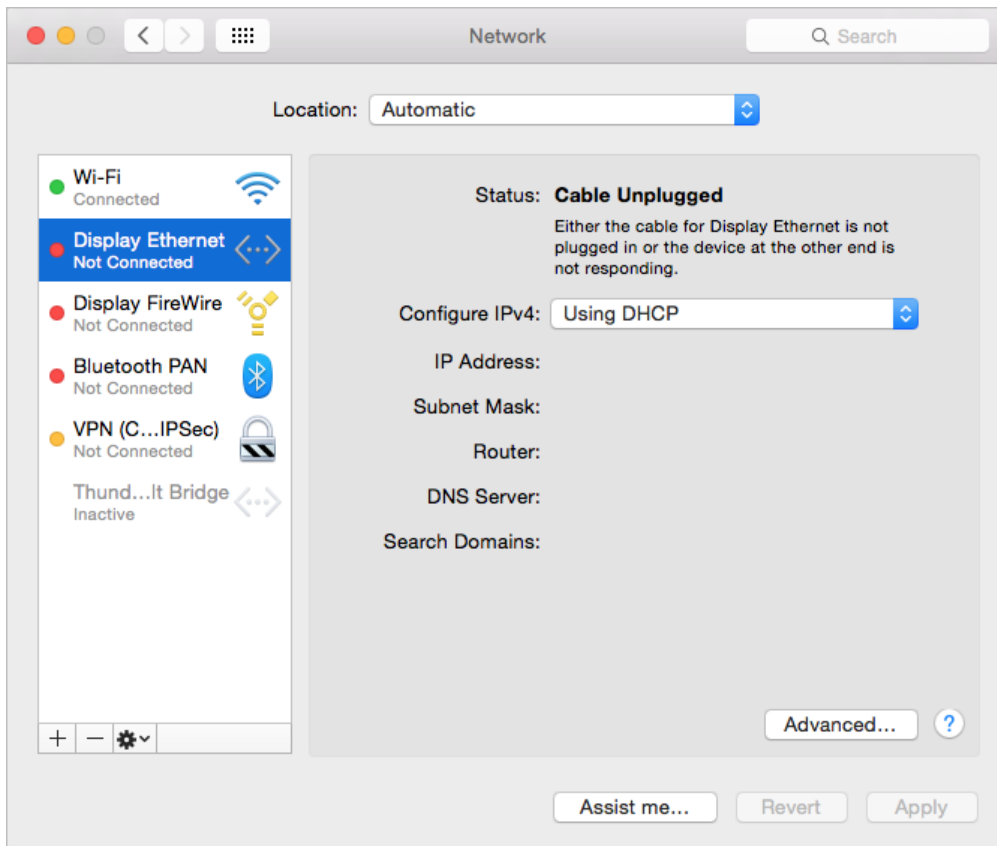

<https://campus.barracuda.com/doc/78152434/>

In order to use the Barracuda Web Filtering Service, you must direct your Mac(s) to the assigned Barracuda Domain Nameservers (DNS). The IP address for the Barracuda DNS nameservers are shown on the **Configure DNS** page of the **Add Location** popup, which you access on the **DNS FILTERING** page.

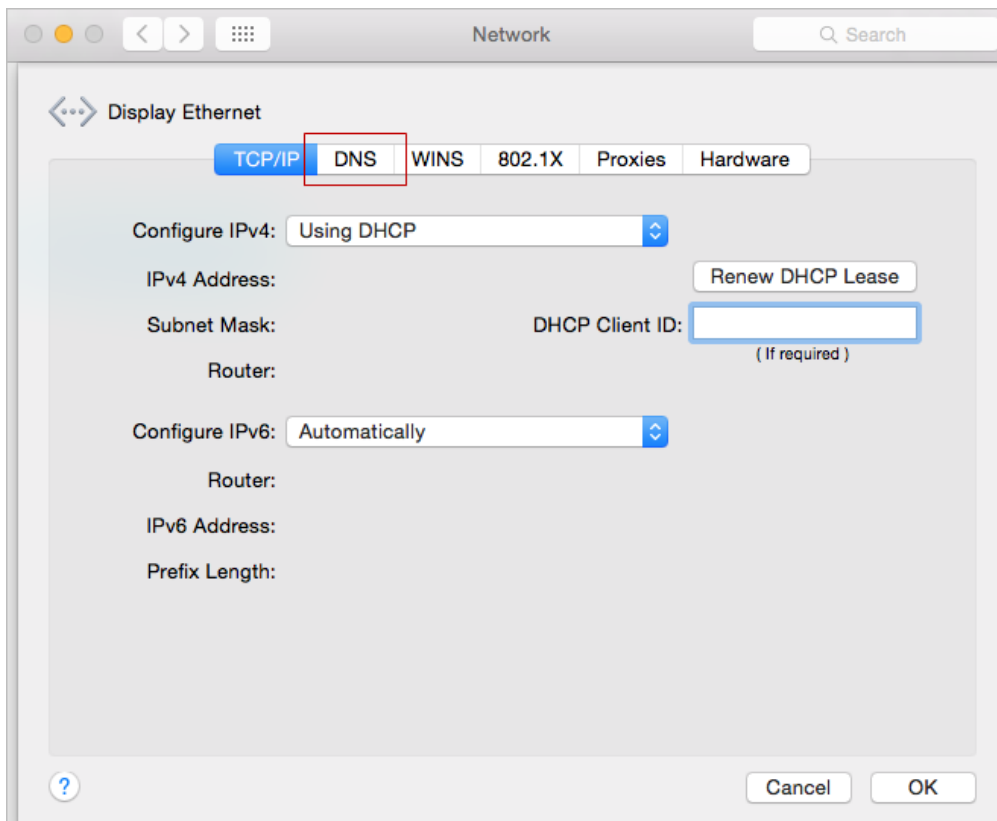

1. Go to System Preferences and click on **Network**.

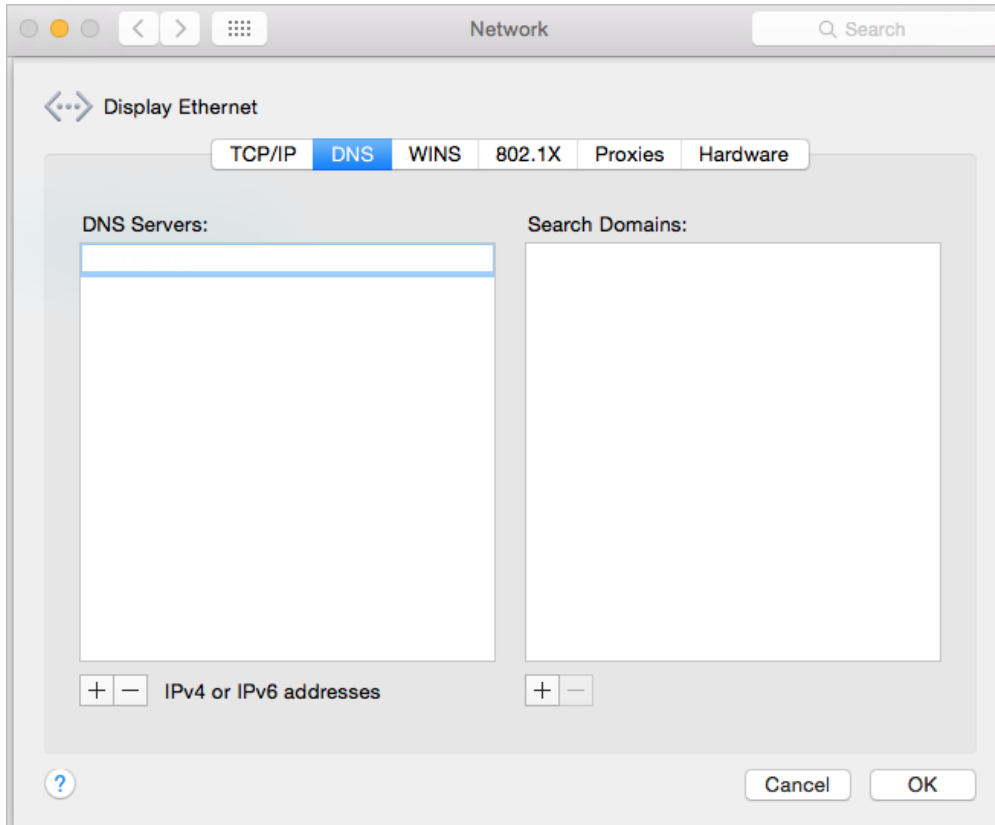

2. Select the first connection in your list and click **Advanced**.

3. Select the **DNS** tab.

4. Add the Barracuda DNS nameserver IP addresses to the list of DNS servers. Click **OK** then click **Apply**.

5. Clear your browser and DNS cache. This ensures that your new DNS configuration settings take effect immediately.
