
Microsoft Windows System Recovery

<https://campus.barracuda.com/doc/78808909/>

In addition to restoring files and folders backed up using the Barracuda Backup Agent for Windows, you can also perform volume-based recovery, system state (OS) recovery, physical-to-virtual recovery, and perform bare metal recovery of a Microsoft Windows system.

To restore data that was backed up using the Barracuda Backup Agent, the Agent must be installed on the restoration target. The exception to this is a file or folder download, which does not require the Barracuda Backup Agent to be present. Data can be restored to any target that has the Agent installed, regardless of whether it was backed up previously with Barracuda Backup.
