

Introduction

<https://campus.barracuda.com/doc/78809090/>

Barracuda Backup is designed as an easy-to-use, comprehensive data protection solution that provides protection for hybrid environments that include a mix of physical, virtual, and cloud technologies.

Barracuda Backup provides protection for:

- VMware vSphere, Microsoft Hyper-V, and Nutanix virtual environments
- Microsoft Windows, macOS, and Linux operating systems
- Network Attached Storage (NAS)
- Microsoft Exchange, SQL, and SharePoint applications

Barracuda Backup can be deployed as either a physical appliance—with appliances ranging from 1TB up to 112TB—or as a virtual appliance (Vx). Barracuda Backup also includes built-in offsite data replication for disaster recovery to another Barracuda Backup physical or virtual device, purpose-built Barracuda Cloud Storage, or Amazon Web Services (AWS).

This document library contains a high-level overview of Barracuda Backup, its architecture, features, and data protection and disaster recovery concepts.
