

Restore Data from a Replication Destination

<https://campus.barracuda.com/doc/78809461/>

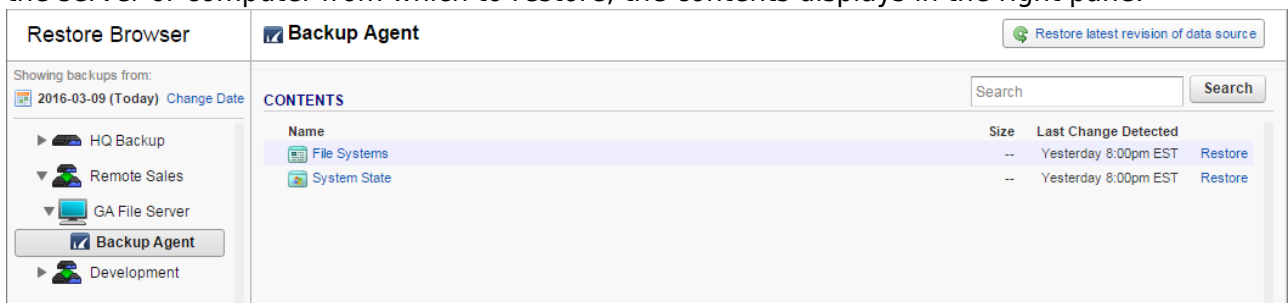

To restore from a replication destination,

1. Log in to the Barracuda Backup web interface, and select the *receiving* Barracuda Backup appliance from which to restore.
2. Go to the **Restore > Restore Browser** page, and in the left pane select the sending Barracuda Backup appliance from which you are receiving data:

The screenshot shows the 'Restore Browser' interface. On the left, under 'HQ Backup', a list of backup sources is shown, with 'Remote Sales' selected and highlighted with a red box. On the right, the 'CONTENTS' section displays a list of backup sources with their names and 'Restore' links. The list includes: Hyper-V, VMware Server 1, Corporate File Server, Linux File Server, Sharepoint, VMware Server 2, SQL, Active Directory, Exchange, Barracuda Message Archiver, and Corporate NAS.

3. Expand the *sending* Barracuda Backup appliance to review its backup sources, and click on the server or computer from which to restore; the contents displays in the right pane:

The screenshot shows the 'Restore Browser' interface. On the left, under 'Backup Agent', a list of backup sources is shown, with 'Backup Agent' selected. On the right, the 'CONTENTS' section displays a list of backup sources with their names, sizes, last change detected times, and 'Restore' links. The list includes: File Systems (Size: --, Last Change Detected: Yesterday 8:00pm EST) and System State (Size: --, Last Change Detected: Yesterday 8:00pm EST).

4. In the **Contents** section, click **Restore** next to the file or directory you wish to restore; the **Restore window** displays.
5. In the **Restore to** field, enter the hostname or IP address of the restore to location. In the **Path** section, select the **Original Path**, or designate a new location.
6. Click **Start Restore**. Once the restore is complete, go to **Reports > Restore** to verify the restore completed successfully.
