
Reports

<https://campus.barracuda.com/doc/78809498/>

You can create a variety of reports with Barracuda Cloud Security Guardian. For each of the reports, you can choose a preset time frame (like Today, Last 7 Days, or Last Month) or create your own specific start and end dates and times.

Summary Report

The Summary Report provides basic information for all of your Azure or AWS accounts, including:

- list of your assets
- map of regions with your assets
- number of your cloud accounts
- compliance scores for each of the security policies, including a trend from the previous period:
 - across all of your accounts, shown on the first page of the report
 - for each account separately, shown on additional pages of the report

When you generate a Summary Report, it downloads automatically as a PDF.

For additional information on a single one of your accounts, run a *Detailed Scan Report*, described below.

Detailed Scan Report

Run a Detailed Scan Report for details about a single security policy (the Scan Type) for a single one of your accounts.

When you run the report, a time-based list of events appears for that account. Click to view a report for each event. You can view a scan from before a fix then a scan from after the fix to compare them.

Cloud Storage Shield Scan Log

Run this report to view activity of the [Cloud Storage Shield service](#) for one of your accounts.

Select the time frame, along with a specific account. Optionally specify the file type determinations you want to include in the scan: **All Files**, only files containing **Viruses**, only **Suspicious** files, or only

Clean files.

The table displays basic information about the files encountered in your S3 buckets, including the file determination, name of the file, and the result - whether it was a virus or, if it was Clean, its heuristics score. Click **Details** to learn more about each of the files.
