Self-Service VPN Provisioning for iOS Devices

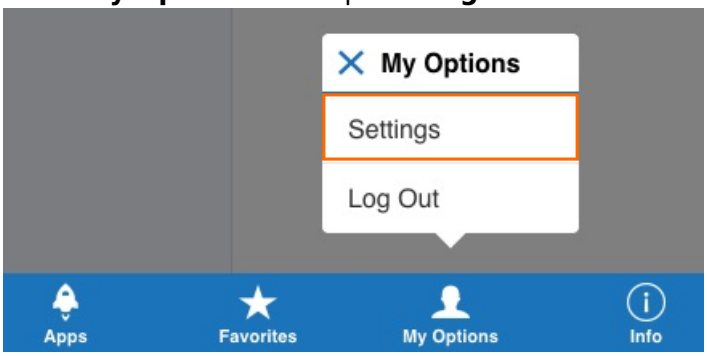
https://campus.barracuda.com/doc/79462842/

Use CudaLaunch to automatically push and manage VPN profiles on iOS devices. For more information, see CudaLaunch.

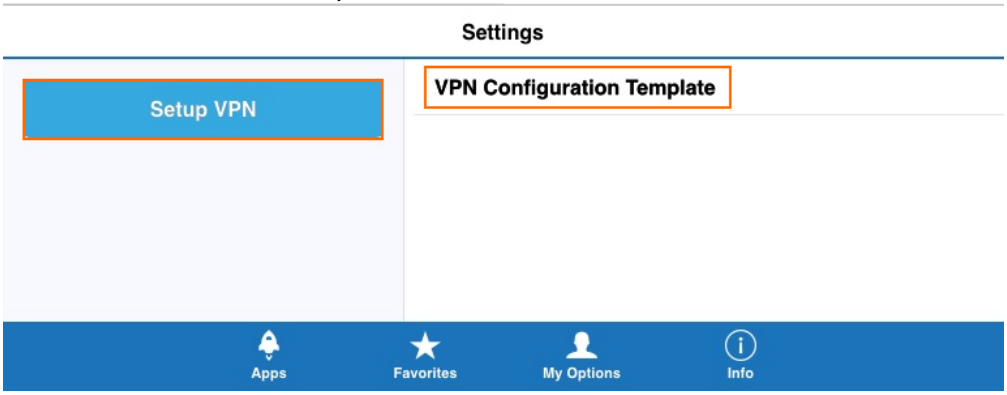
Companies with a bring-your-own-device (BYOD) policy cannot rely on MDM to manage and push out the VPN configuration to the users' smartphones and tablets. The Barracuda CloudGen Firewall mobile portal allows users to automatically install the VPN configurations on their iOS device by clicking the provisioning link in the mobile portal.

Self-provision the Built-in IPsec Client

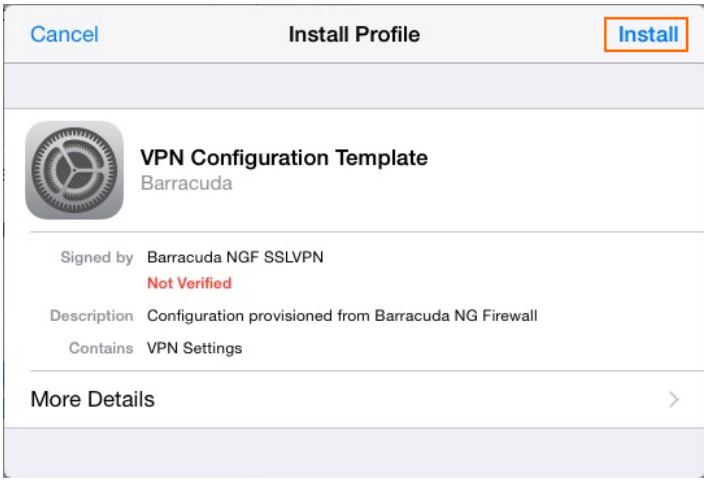
1. Log into the web portal with your iOS device.
2. Go to **My Options** and tap **Settings**.



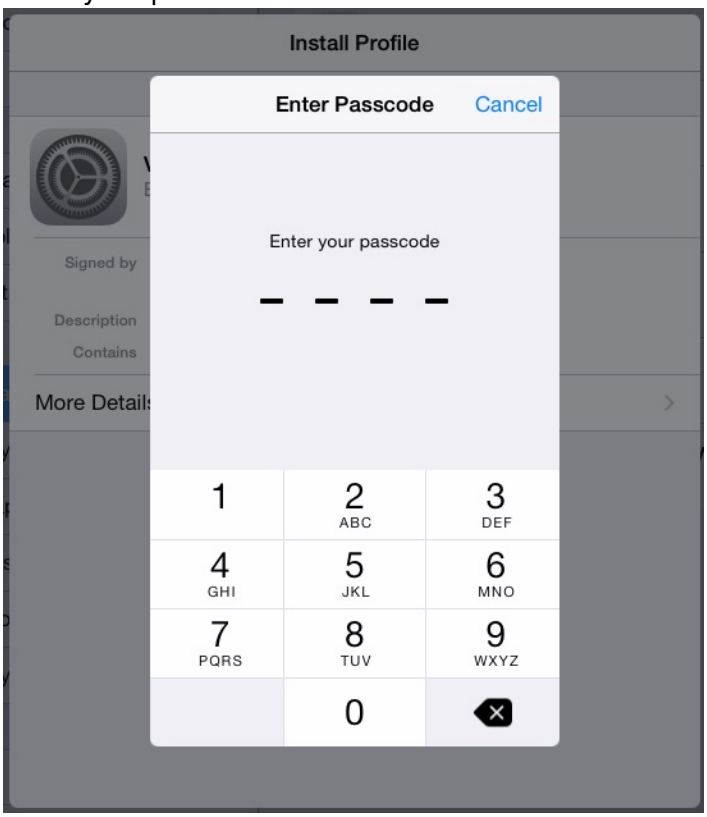
3. Tap **Setup VPN**. All available VPN templates are listed.
4. Tap on a VPN template. This is the **Display Name** of the VPN File's SSL VPN resource. The **Install Profile** window opens.



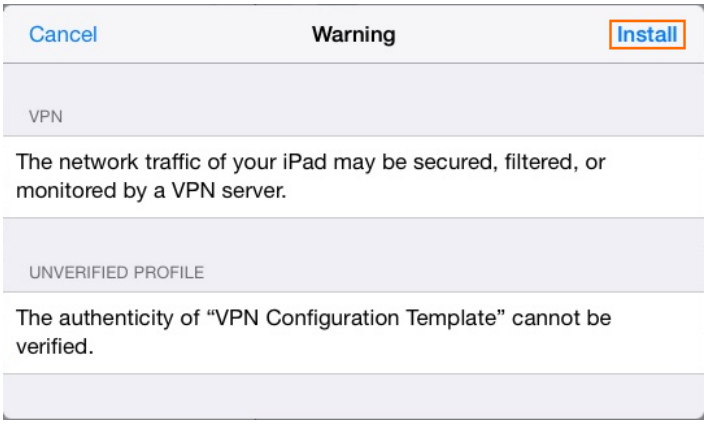
5. Click **Install**.



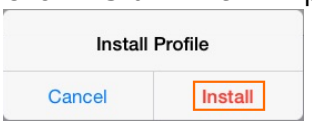
6. Enter your passcode.



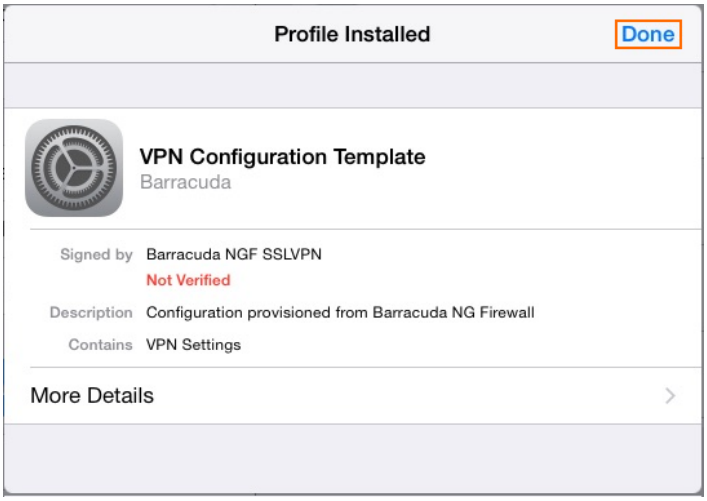
7. Click **Install**.



8. Click **Install**. The VPN profile is installed.



9. Click **Done**.



You can now connect to the IPsec VPN on your iOS device.

Establishing a VPN Connection

After you have installed the IPsec VPN configuration, your iOS device can connect to the Barracuda CloudGen Firewall via IPsec VPN.

1. From the home screen of your iOS device, go to **Settings** and tap **General**.
2. Tap **VPN**.
3. Set the **VPN** slider to **ON**. The iOS device initiates the VPN connection.

When the VPN connection is established successfully, the VPN icon is displayed in the status bar.
