

CONTROL Tab

<https://campus.barracuda.com/doc/79463212/>

The Barracuda Firewall Admin **CONTROL** tab provides an overview of all status-, network-, and session-relevant processes and contains the **Box** section that allows the management of tasks affecting the operating system, such as activating network-relevant configuration changes.

The **CONTROL** tab provides six separate pages:

- **Services** – The [Services](#) tab lets you control and monitor services that are configured on your Barracuda CloudGen Firewall.
- **Network** – The [Network](#) tab provides information about your network interfaces and IP addresses. From here you can access network information and routing tables.
- **Resources** – The [Resources](#) tab provides a detailed view of the processes that are active on your firewall and shows system memory, disk usage, and hardware details, if applicable.
- **Licenses** – The [Licenses](#) tab shows the current license status and provides options for importing and exporting licenses.
- **Box** – The [Box](#) tab lets you manage key settings for the firewall box operation. From here, you can also configure authentication settings, restart the unit, and activate network configuration changes.
- **Sessions** – The [Sessions](#) tab provides an overview of all sessions that are active on the firewall. From here, you can also terminate sessions.
