

Nutanix AHV Support

<https://campus.barracuda.com/doc/79463737/>

To protect virtual machines (VMs) running on Nutanix AHV, Barracuda Backup recommends installing the Barracuda Backup Agents for Windows and Linux inside each guest VM and performing guest-level backup and recovery. At this time, Barracuda Backup does not provide hypervisor-level snapshot support for Nutanix AHV.

While the Barracuda Backup Vx can be deployed to and run successfully on Nutanix AHV, Barracuda Networks does not officially support running the Backup Vx on Nutanix AHV at this time until further testing and validation is complete.
