

Step 4: Look at the Assets

<https://campus.barracuda.com/doc/84313076/>

Background

Now you can make note of what assets are available in the site and determine how to organize the devices.

View a Summary of Assets Use the Managed Windows Inventory views to see assets by site. You can get a quick view of the Windows-based hardware, operating systems, applications and other information about each site. You can then drill down to the actual devices to see more detail.

Tip: Assets with the largest numbers are the most likely candidates for monitoring groups.

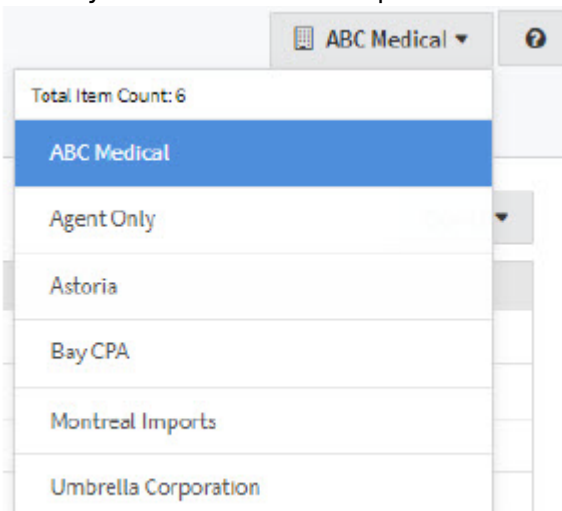

View Device Details Use the Device Overview to dive into details about a specific device.

Try This—Looking at Assets

Now that you have addressed any onboarding issues, you can have a look at the assets available to group and monitor.

View a summary of assets

1. In Service Center, click **Site Management > Windows Inventory**.
2. Select your site from the dropdown list at the top right of the page.

- Browse through the tabs to see the different types of inventory.

Site Management / Windows Inventory
