

About Microsoft Hyper-V

<https://campus.barracuda.com/doc/84313464/>

Microsoft Hyper-V is a virtualization system that allows you to set up clusters of host machines and virtual guest machines. By creating and managing a virtual environment, you can reduce costs, improve server availability, and increase the efficiency of your computing environment.

The Hyper-V service module gives you direct access to view and manage your Hyper-V virtual IT infrastructure, presented in the form of dashboard views, reports, and alerts. You can also execute commands from within Barracuda Managed Workplace to manage guests and take snapshots.

See “Using Service Modules” in the User Guide or online help
