
Overview

<https://campus.barracuda.com/doc/84968178/>

Barracuda Firewall Insights is an advanced reporting and analysis product that can be installed on various virtualization solutions. Firewall Insights is the most flexible reporting solution that gathers, consolidates, and analyzes data fully automatically from all Barracuda CloudGen Firewall deployments across your organization's network, including public cloud deployments. In addition to other reporting solutions, Firewall Insights provides a status overview for the entire WAN with details and availability of SD-WAN connections, transport details, security, and web and network traffic details. More than one hundred predefined reports for areas like safety & liability, network activity, web activity, security, and productivity are provided, including summary reports. All reports can be customized for individual time frames and can include all or just a subset of the deployed firewalls (e.g., just the WAN for a specific region or country).

First Steps with Barracuda Firewall Insights

Follow the guides below to get Firewall Insights up and running:
