

## Managing Users and Authentication

<https://campus.barracuda.com/doc/86540766/>

Different departments require differentiated access to web content. Barracuda Content Shield integrates with LDAP and Azure AD, making it easy to set policy based on individual users or groups. Or you can manually add users/groups and assign policies accordingly.

- If you want to integrate your existing LDAP/AD server with your BCS account, see [LDAP Active Directory and Barracuda Content Shield](#).
- If you are using Microsoft Azure AD, see [Microsoft Azure Active Directory Support for Single Sign-On](#).
- If you want to manually configure users in the BCS database, see [Manually Configure Local Users](#).
