Enforce a Strong Password Policy

https://campus.barracuda.com/doc/86545699/

Implementing and enforcing a strong password policy is crucial to security. A strong password policy includes the following:

- Requiring passwords that cannot be easily guessed or vulnerable to brute-force/dictionary attacks
- Instituting a frequent password change policy
- Requiring unique passwords for different customer sites

Ensure the password change policy is enforced throughout your organization and for your entire portfolio of tools. Use a password generator to generate credentials such as GRC Passwords, which generates long, high-quality, random passwords.
