

Microsoft Entra Multifactor Authentication Requirements for Microsoft CSPs

<https://campus.barracuda.com/doc/88539266/>

This article applies to a Barracuda Message Archiver with a Microsoft Cloud Solution Provider account. Note that this is not a common setup.

Starting August 1, 2019, all Microsoft Cloud Solution Providers (CSPs) must use multi-factor authentication for all users, including service accounts, in their partner tenant.

For more information, see [Partner Security Requirements](#).

Required use of multi-factor authentication (MFA) impacts all Barracuda Networks partners who are Microsoft CSPs and who configure Microsoft Entra ID in Barracuda Cloud Control. Barracuda Cloud Control does not yet support the use of Microsoft Entra MFA, which causes login failures if Microsoft Entra MFA is enabled or required. As a workaround to bypass MFA, you can configure a conditional access policy in Microsoft Entra ID for users signing in from trusted IPs or create an app password to allow apps access to your Microsoft 365 account.

Conditional Access Policy

To configure a conditional access policy and enable trusted IPs, refer to the section on Trusted IPs in the Microsoft support article [Configure Microsoft Entra multifactor authentication settings](#).

Contact your system administrator to obtain the external IPs necessary to create the conditional access policy.

App Password

If you are using Barracuda Message Archiver firmware version 5.3 or higher, set up Exchange Integration jobs with Exchange Online using EWS instead of a service account with an app password. See [Configure Microsoft Exchange Online Email Import Using EWS](#).

To generate an app password to connect apps to Microsoft 365, refer to the Microsoft article [Create an app password for Microsoft 365](#). Using an app password allows Barracuda to run Exchange

Integration jobs without the need to authenticate with MFA.
