## What's New in Barracuda Managed Workplace 10 SP2 MR1

<https://campus.barracuda.com/doc/89620959/>

### Reboot Control

---

Now, when you schedule the application of patches to devices, you have additional control over when devices will reboot. When patches require a device reboot, you can choose to have devices reboot immediately, or wait to reboot until after a logged on user finishes their work. This means fewer interruptions and less lost time for users.

See [To set up a schedule for Microsoft patches that overrides any applicable execution schedules](#).

### Improvements to Autotask Integration

---

You can now map Autotask asset types in Barracuda Managed Workplace.

See *Completing the Service Desk Configuration* in the *Autotask chapter* of the *PSA Guide*.
