

Stopping Advanced Software Management

<https://campus.barracuda.com/doc/89620996/>

In order to use Advanced Software Management to apply updates, you must purchase an additional license. Contact your Barracuda sales representative.

You can stop Advanced Software Management in two ways:

- By removing the Advanced Software Management policy that is applied to a device. This stops Advanced Software Management for that individual device.
- By deleting an Advanced Software Management policy. This stops Advanced Software Management for all devices and groups applied to that patch policy.

To stop Advanced Software Management for a Device

1. In Service Center, click **Status > Devices**.
2. Use the filters at the top to narrow down the list of devices.
3. Click the name of the device on which you want to stop Advanced Software Management.
4. In the **Applied Policies** area, move the slider to turn off the applied patch policy.

To stop Advanced Software Management by deleting a Patch Policy

When you delete an Advanced Software Management policy, you are removing third party software management from any devices that have the policy applied.

You can't delete the Default Advanced Software Management policy.

1. In Service Center, click **Configuration > Policies > Advanced Software Management**.
2. Select the check box beside the patch policy you want to delete.
3. Click **Delete**.
