

Removing an Antivirus Policy

<https://campus.barracuda.com/doc/90442056/>

When you remove an Antivirus policy, any devices that were managed using that policy go into an unmanaged state, which means that Antivirus is still installed on the device, but it does not receive any management commands or policy updates from the Onsite Manager. For example, changes to the policy settings will not be applied to the device, and clicking **Scan Now** will fail.

If you remove an Antivirus policy that is applied to devices, you should either first uninstall Antivirus from that device, or apply a different Antivirus policy to the device.

1. Click **Configuration > Policies > Avast Antivirus**.
2. Select the check box beside the Antivirus policy you want to remove.
3. Click **Delete**.
