

## Exporting a Script

<https://campus.barracuda.com/doc/90442351/>

When you export a script, information from the script is stored in an .MWS file along with all required script files. The file contains the original script file or files (or .ZIP file) along with an .XML file that contains the meta data for the script. By doing this, if the script is imported into another system, the meta data is preserved.

1. In Service Center, click **Automation > Library**.
2. Select the check box beside the name of the script that you want to export.
3. From the **More Actions** list, select **Export**.
