

Understanding the Pre-Built Advanced Software Management policy

<https://campus.barracuda.com/doc/90444573/>

Barracuda Managed Workplace includes a pre-built patch policy that is configured to manage third party applications on Windows workstations and Windows servers. You can use the default Advanced Software Management policy as it is, or modify it. You can also copy the default policy to use as a starting point to create an entirely new policy.

The following table provides an overview of the default Advanced Software Management policy:

Advanced Software Management policy	Description
Default Advanced Software Management policy	<ul style="list-style-type: none">• set up to scan for available software updates every 22 hours• patches are installed according to the applicable Execution Schedules• newly added devices of this policy are not added to a special approval group• does not use automatic application rules, so, to be effective, it must be added to an active Service Plan or a Service in an active Service Plan
