

How to Enable/Disable a Firewall to Receive Configuration Updates from CC

<https://campus.barracuda.com/doc/90444660/>

After saving configuration changes in nodes of the configuration tree, the Control Center continuously attempts to send configuration updates to the firewall. If the target firewall is enabled to receive these changes, they are taken over. You may, however, choose to not forward configuration changes on the Control Center to a firewall.

The **Disable Box** parameter should be enabled in the **Box Properties** if a firewall has already been configured in the Control Center, but has not been installed yet. To disable or enable a firewall:

1. On the Control Center, go to **CONFIGURATION > Configuration Tree**.
2. Expand the **Multi-Range** node and the cluster where the firewall unit is located.
3. Open the box and double-click **Box Properties**.
4. Click **Lock**.
5. In the left navigation pane, select **Operational**.
6. Select **yes** or **no** from the **Disable Box** drop-down menu.
7. Click **Send Changes** and **Activate**.

Operational Settings	
Disable Box	yes
CC Activates Network	no
ART Network Activation	yes
Disable Barracuda Activation	No
Collect Statistics	like-cluster
Went Operational	
Box->CC Access	Standard-CC-IP
Explicit CC IP	
CC->Box Access	Standard-Box-IP
Explicit Box IP	
Authentication Sync Zone	<input type="checkbox"/> Other
