

Logging and Reporting

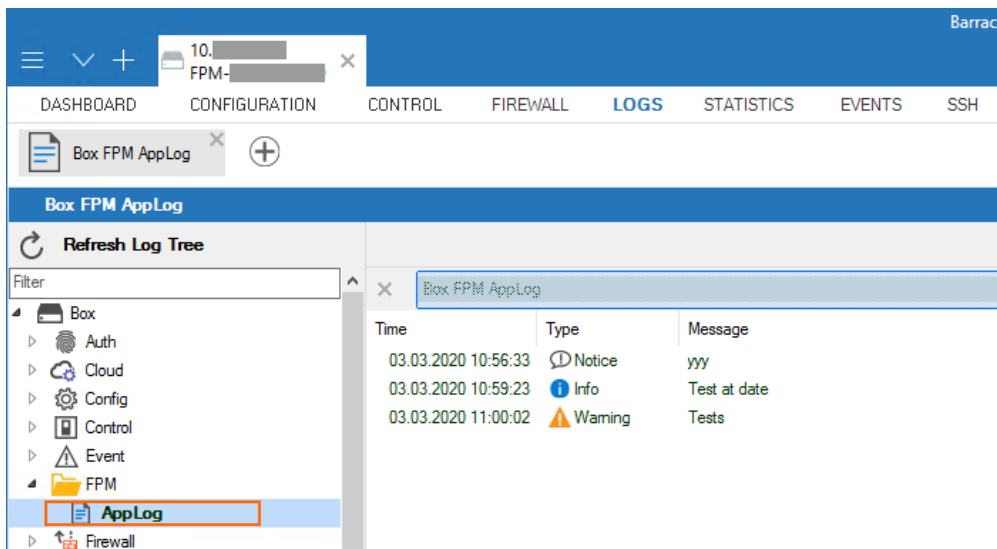

<https://campus.barracuda.com/doc/91985653/>

The Barracuda CloudGen Firewall creates log files for the Firewall Policy Manager if configured to do so. Logging is processed according to system and service settings. Log data related to the Firewall Policy Manager is stored in a box folder and can be accessed through the log tree on the **LOGS** page. The log file can also be found in `/var/phion/logs`, named `box_FPM_AppLog.log` on the box. For information on how to view and filter log file entries, see the Barracuda Firewall Admin **LOGS Tab** in the CloudGen Firewall documentation.

Access FPM Log Files

To view logs generated by the Firewall Policy Manager:

1. Log into Firewall Admin.
2. Click the **Logs** tab.
3. In the log tree on the left, expand **Box**.
4. Expand the **FPM** folder. You can access the following logs:
 - **AppLog** - Application
 - **Auth** - User login
 - **Backup** - Backup details
 - **BoxApi** - Internal API access
 - **Email** - Notifications
 - **Router** - Internal web activity
 - **Scheduler** - Cronjobs

The screenshot shows the Barracuda Firewall Admin interface. The top navigation bar includes tabs for DASHBOARD, CONFIGURATION, CONTROL, FIREWALL, LOGS (selected), STATISTICS, EVENTS, and SSH. The left sidebar shows a log tree with 'Box' expanded, and 'FPM' and 'AppLog' also expanded. The main content area displays a table of log entries for 'Box FPM AppLog'.

Time	Type	Message
03.03.2020 10:56:33	Notice	yyy
03.03.2020 10:59:23	Info	Test at date
03.03.2020 11:00:02	Warning	Tests

To view detailed entries for a log file, double-click the message in the column.

For information on how to configure log settings on the Barracuda CloudGen Firewall, see [Logging](#) and [How to Enable the Firewall Audit Log Service](#) in the CloudGen Firewall documentation.
